

FACILITIES PROPOSAL · MANAGEMENT REVIEW

# A dedicated garage for Goodyear SightLine at NATRAX

Securing our equipment, tires, and future at India's  
flagship proving ground.

## ABOUT THE SITE

# India's largest automotive proving ground

---

**3,000**

ACRES AT PITHAMPUR

**14**

TEST TRACKS

**5**

LABORATORIES

**NABL**

ACCREDITED · SINCE 2022

Developed under NATRiP, a Ministry of Heavy Industries programme, NATRAX at Pithampur is one of Asia's largest proving grounds — used by OEMs, Tier-1s and tyre makers for homologation, R&D and vehicle-dynamics testing, 50 km from Indore on the Indore–Mumbai highway.

---

NATRAX's own building plan already includes a Client Workshop Building and a General Storage & Maintenance Workshop — a dedicated SightLine bay follows the same model the site is already built around.

THE ASK

Allocate a dedicated garage at NATRAX, Indore

A dedicated space secures our assets, makes the operation permanent, seeds a future Indore instrumentation lab, and establishes Goodyear’s presence at India’s principal proving ground.

|                                                         |                                                                       |                                              |                                |

## WHERE WE ARE TODAY

# No secure space for tires or instruments today

---

### Shared container.

No dedicated, lockable footprint of our own.

---

### High-value instrumentation on site.

VBOX 3i, GL2000 logger, Raptor CAL, CANoe / CANape, IMU, TPMS — plus confidential prototype tires.

---

### No secure storage.

For tires or instruments between test campaigns.

---

### Shared ground.

Competitors, including Michelin, test at the same facility — a real confidentiality and IP risk.

---

OUR CURRENT CONTAINER · NATRAX, INDORE

## VEHICLE CUSTODY

**Once an OEM hands over a test vehicle, its safety and security become Goodyear's responsibility — not NATRAX's, not the OEM's.**

### **No covered parking**

Vehicles sit on open pavement through sun, dust and monsoon rain.

### **No access control**

Parked beside a shared, unlocked container on a shared testing ground.

### **Full liability exposure**

Any damage, loss or exposure in our custody is ours to answer for.

## Tires and instruments need a real warehouse flow

Every campaign moves prototype tires and calibrated instruments in and out of NATRAX. Without a fixed base, that flow has no secure stage to run through.

**01**

### Inbound

Prototype tires and instruments arrive from plant, R&D or calibration.

**02**

### Secure store

Racked and logged in a lockable bay, out of competitors' sight.

**03**

### Issued for test

Checked out against a campaign, fitted and mounted on-site.

**04**

### Logged return

Checked back in, inspected, held for the next campaign or dispatch.

## Five reasons for a dedicated footprint

---

**01**

### Asset security & IP protection

Lockable, dedicated storage for costly instruments and confidential prototype tires, separated from competitors on the same ground.

---

**02**

### A permanent, ready operation

Instrumentation stays calibrated and set up between campaigns — faster turnaround, more usable test days.

---

**03**

### Foundation for an Indore lab

A fixed base is the first step toward a small in-house instrumentation lab for data and build-up work.

---

**04**

### Central-India logistics

Indore sits at India's geographic centre — faster, cheaper transport of vehicles, tires and equipment.

---

**05**

### Brand presence & demonstrations

An on-site footprint enables marketing and OEM demonstrations at India's flagship proving ground.

## OPERATIONS

# Key tasks performed at the workshop

---

### 01 Vehicle receipt & inspection

Intake check and custody log for every OEM vehicle handed to SightLine.

---

### 03 Instrumentation install & calibration

Fit and calibrate VBOX, IMU, TPMS and CAN loggers before every run.

---

### 05 Test data download & backup

Offload GL2000 / CANape logs and back them up after each session.

---

### 07 Equipment upkeep & calibration checks

Routine maintenance of loggers, rigs and tools between programmes.

---

### 02 Tire fitting & wheel balancing

Mount, dismount and balance prototype and reference tires for each build.

---

### 04 Lift access & vehicle prep

2-post lift for underbody checks, sensor mounting and ride-height setup.

---

### 06 Secure tire & equipment storage

Log tires and instruments in and out between test campaigns.

---

### 08 Vehicle security & custody handling

Covered, access-controlled parking for vehicles in our care.

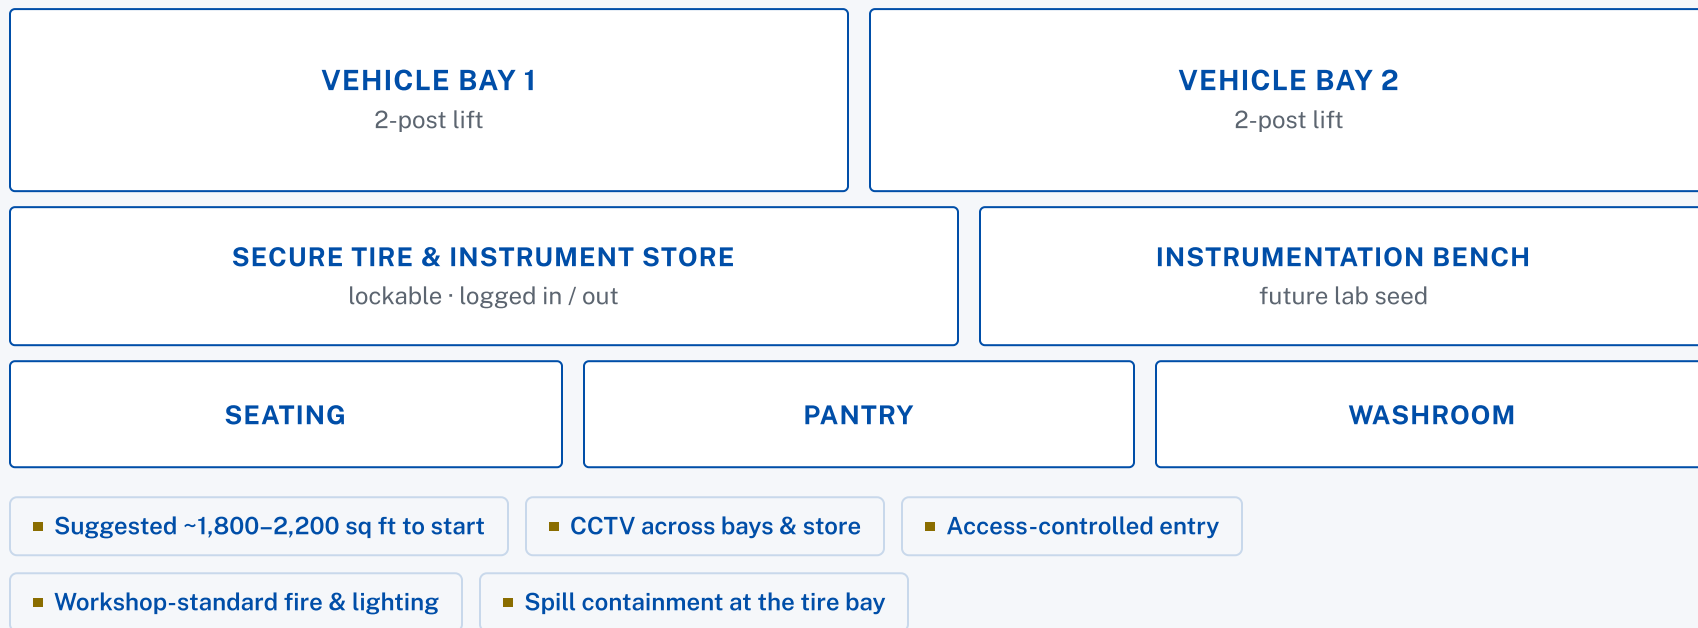

---

## RECOMMENDATION

# Recommended garage layout

A lean, secure footprint sized for today's programme, with room to grow into the future Indore lab.

## INVESTMENT

# What the garage needs

# ₹15–20L

Estimated annual workshop budget

## EQUIPMENT · NATRAX-PROVIDED

---

- 2-Post Lift
  - Tire Changer
  - Wheel Balancing Machine
- 

## WORKSHOP & AMENITIES

---

- Secure Tire & Instrument Storage
  - Seating Area
  - Pantry
  - Attached Washroom
-

WHY NATRAX, WHY NOW

## NATRAX is becoming India's vehicle-validation hub

India's largest proving ground — 3,000 acres, 14 tracks, NABL-accredited — and still growing. OEMs and Tier-1s are increasingly centring their India validation work here. Establishing dedicated infrastructure now positions Goodyear ahead of the curve, operationally and in brand visibility.

- 
- ARAI opened a new vehicle-evaluation office on site (2026)
- 
- New MoU signed with NAMTECH (2026)
- 
- Marked its 5th Foundation Day in 2026 — still early in its growth curve
-

## NEXT STEPS

# Three steps to a decision

**1**

### Confirm

Garage / bay availability and size with NATRAX.

**2**

### Define

Secure storage and a basic, lab-ready fit-out.

**3**

### Approve

Budget and the lease / allocation.

GOODYEAR SightLine
